

IN THE ABSTRACT:

Please amend the abstract as follows:

-- An information processing apparatus ~~for executing~~ executes a predetermined procedure corresponding to a designated command ~~designated by a user~~. The apparatus includes a A database which holds plural a plurality of candidates corresponding to plural a plurality of commands~~[[,]]~~ and command groups, each command group including commands related to each other. A ~~[[a]]~~ selection unit which selects a command group, ~~which includes some commands which relate, in response to user operation, a decision button which is operable by the user,~~ A ~~[[a]]~~ voice output unit which outputs each selected candidate as voice information, ~~from the candidates, which correspond to the commands included in the selected command group, one at a time,~~ A decision button, operable by the user, designates any one of the selected candidates output by the voice output unit. A ~~and a~~ determination unit which determines a command candidate designated by the user. When the user operates the decision button during the voice information corresponding to the output candidates, ~~one candidate that is output,~~ the determination unit determines a command corresponding to that candidate as the designated command~~[[,]]~~. When ~~and when~~ the user operates the decision button during the voice information corresponding to another candidate ~~that is output by the voice output unit,~~ the determination unit determines a command corresponding to the other candidate as the designated command. --
